### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

No prior art has been found teaching or suggesting a multiplicity of single-stranded oligonucleotide primer for simultaneous amplification of multiple target DNA sequences under a single set of reaction conditions in a single multiplex PCR in which the primer has a 5' X domain and a 3' Y domain wherein the 5' X domain comprises a common sequence which does not hybridize any one of the multiple target DNA sequences and the 3' Y domain comprises a sequence containing within or flanking one of the target sequence or its complement, the melting temperature is different between different hybrids formed with other 3' Y domain. Further no prior art has been found teaching or suggesting using a multiplicity of single-stranded oligonucleotide primer having a 5' X domain and a 3' Y domain wherein the X domain has SEQ ID NO: 64 in a simultaneous amplification of multiple target DNA sequences reaction. The instant invention can prevent the synthesis of spurious amplification products. The closest prior art is the reference of Weighardt et al. Weighardt et al. teach a tailed oligonucleotide primer which has 5' ends with an unrelated sequence to a target sequence and the 5' end sequence has restriction sites. The method of Weighardt et al can be used in a single step amplification with a single set of primers. However, the instant invention is used in simultaneous amplification of multiple target DNA sequences with a multiplicity of single-stranded oligonucleotide primer.
